PROFESSIONAL SUMMARY

Senior Software Engineer with 7+ years of experience building scalable Java microservices and event-driven systems with Spring Boot, Spring WebFlux, Apache Kafka and AWS. Promoted twice across TCS and Nagarro. Recently architected core booking modules for a nationwide automotive resale product, led 3 engineers, and built an archival pipeline that moved 300M+ records. Turns requirements into resilient, well-tested services with cross-functional teams.

TECHNICAL SKILLS

Languages: Java 8+, SQL, Bash/Shell Scripting

Core Java: OOP, Collections, Multithreading and Concurrency, Streams and Lambdas, Exception Handling, Design Patterns

Frameworks: Spring Boot, Spring Framework, Spring WebFlux, Spring MVC, Hibernate, JPA, J2EE

Architecture & APIs: Microservices, Distributed Systems, Event-Driven Architecture, RESTful APIs, API Design, Reactive Programming, Asynchronous Processing

Messaging & Streaming: Apache Kafka, AWS SQS, AWS SNS

Cloud: AWS (Lambda, S3, DynamoDB, SQS, SNS, Glue, CloudWatch)

Databases: PostgreSQL, Oracle, IBM DB2, MongoDB, DynamoDB

Resilience Patterns: Circuit Breaker, Retry and Backoff, Rate Limiting, Caching, Kafka Partitioning, Horizontal Scaling, Latency Tuning

Testing: JUnit, Mockito, Postman

DevOps & Tools: Jenkins, Git, CI/CD Pipelines, IBM WebSphere, JBoss EAP, Linux/Unix, Agile, Scrum

PROFESSIONAL EXPERIENCE

Associate Staff Engineer

Jan 2024 – Sep 2026

Nagarro | Gurugram, India | Promoted from Senior Software Engineer

- Architected the Test Drive and Follow-Up modules of an enterprise automotive resale platform serving 600+ dealer outlets in 300+ cities, owning REST API contracts, service boundaries, data model and rollout.
- Engineered reactive, non-blocking Spring WebFlux services that handle high-concurrency dealer and customer traffic with low latency.
- Created a serverless archival pipeline on AWS (Lambda, SQS, DynamoDB, S3, Glue) that moves 300M+ aged records to low-cost S3 storage and replaced a manual process.
- Decoupled 4 services with asynchronous SQS, SNS and Lambda workflows, isolating failures so one slow consumer no longer blocks booking and follow-up flows.
- Led a team of 3 engineers through code reviews and design discussions; defined standards for microservice boundaries, API design and CI/CD, and drove root-cause analysis for critical incidents.

Senior Software Engineer

Jul 2022 – Jan 2024

Nagarro | Gurugram, India

- Developed 3 Spring Boot microservices for a large-scale E-commerce Order Management System (OMS) processing high-volume, real-time orders.
- Streamed order events between services through Apache Kafka pipelines with reliable, real-time delivery.
- Hardened the platform for peak sale traffic with circuit breakers, retry with backoff and partitioned Kafka consumer groups, improving resiliency and horizontal scalability.
- Delivered asynchronous notification and workflow services for an automotive CRM platform using Spring Boot, AWS Lambda and SNS/SQS messaging.

System Engineer

Feb 2021 - Jul 2022

Tata Consultancy Services (TCS) | Gurugram, India | Promoted from Assistant System Engineer

- Built and maintained Java backend services and RESTful APIs for enterprise banking applications on IBM WebSphere and JBoss.
- Automated build and release pipelines with Jenkins, Git and shell scripting, cutting deployment time by 50% (from 40 to 20 minutes) and eliminating manual release steps.

Assistant System Engineer

Feb 2019 - Feb 2021

Tata Consultancy Services (TCS) | Gurugram, India

- Implemented the TCS BaNCS capital markets platform for 4 institutional clients, supporting upgrades and 8 production releases.
- Resolved release-time defects on JBoss EAP 7 and IBM DB2 through log monitoring, debugging and Bash automation.
- Collaborated with business and QA teams on requirements, sprint planning and cross-team coordination in Agile delivery.

EDUCATION

M.Tech, Software Systems (Specialization: Data Analytics)

2024

BITS Pilani (WILP)

B.Tech, Computer Science & Engineering

2018

PEC, Kanpur

AWARDS

- Technical Excellence Award, TCS – deployment automation, data warehouse pipelines and cross-system interface setup.
